Im trying to understand how the Max connection works. Basically I have this db

Im trying to understand how the Max connection works. Basically I have this db

params.MinSessions = 5 params.MaxSessions = 6 params.SessionTimeout = 0

However I can see 242 connections using sql.DB.Stats:

DB Established Open Conn (use + idle): 242 DB Idle Conn: 0 DB In Use Conn: 2

How is it possible? The limit shouldn't be 6?
